EXPERIENCE

Povio Ltd, Lead DevOps Engineer, Remote

- *Head Of DevOps engineer for U.S based mid-sized client*
Sept 2022 - present

- Being a trusted advisor in all things AWS.
- Understanding clients needs and desires. Provide feedback, eliminate concerns and distribute work to relevant parties.
- Maintain and provide support for the working infrastructure and services
- Leading development and implementing novel solutions as infrastructure as code.
- Manage, lead and mentor a small team of DevOps engineers. Assigning work based on technical capabilities while also providing them with both personal and professional growth opportunities.

Bloom And Wild Ltd, Senior Platform Engineer, Remote

- Platform engineer for one of Europe's biggest flower delivery company

Nov 2021 - Aug 2022

- Eliminate friction from development to delivery.
- Maintain platform and services uptime including support for developers and relevant stakeholders.
- Spearhead development of self serving microservices offering.
- Shift to self hosted Github runners.

Freelance DevOps engineer and consultant - geneplanet,

Ljubljana - *DevOps engineer and consultant*

May 2020 - Nov 2021

- Using expertise gained to provide developers with a platform where they can develop and deploy with confidence
- Automating as much as possible and doing IaC as well as On-Prem infra
- To achieve the goal used terraform, nomad, vault, consul, consul templates, vagrant and packer, docker-compose and git
- Currently working on a .net microservice framework on top of MS Azure utilizing containers, Service Plans, Function apps, App Insights to name a few. My work is setup and provisioned with IaC and terraform and thus cloud agnostic

d.labs, Ljubljana - *DevOps engineer*

November 2018 - May 2020

- Working with IaC to provide developers with working infrastructure. AWS based.
- To achieve the goal I used terraform, nomad, vault, consul, consul templates, vagrant and packer.

Multimedia Vision, Ljubljana - *System administrator & operator*

November 2017 - November 2018

- Working with VMware to ensure virtual machines for the dev environment work on the next generation of smart set-top boxes.
- Maintaining and implementing periodic backups and disaster recovery plans. Improving software delivery with pipelines and incorporating them to the workflow.

Jozef Stefan Institute, Ljubljana - *System administrator*

September 2015 - Februar 2017

- Responsible for maintaining Windows and Linux servers and computers with virtualization - hyper V, firewall, AD user auth, updating programs, managing backups and validation.
- Day to day operation including support and new machine setup
